Renewables

FOR A BETTER WORLD OF ENERGY **IRELAND COMMUNITY FUND**

ANNUAL REVIEW 2019/20

Introduction to the SSE Airtricity Ireland Community Fund

SSE Airtricity and SSE Renewables are part of the SSE Group. SSE Renewables is Ireland’s largest generator of wind power and provides voluntary community funding in support of energy efficiency, safety and sustainability projects. This funding is awarded to community groups near SSE Renewables’ wind farms in Ireland. The Community Fund for each wind farm is operated by its sister company SSE Airtricity, with the exception of the community fund for Galway Wind Park which is a joint venture with Greencoat Renewables. The Galway Wind Park Community Fund was launched in 2018 and, at around €400,000 annually, is the largest community fund of its kind in Ireland.

FOREWORD

2019/20 has been a busy year for the SSE Airtricity Ireland Community Fund, which distributes funding from SSE Renewables’ wind farms across Ireland to community groups and projects, and in particular the funds associated with Galway Wind Park. We saw the completion of the first round of the Galway Wind Park Major Projects Fund (launched in 2018) and the launch of our newest fund, the Galway Wind Park Scholarship Fund.

The Galway Wind Park Major Projects Fund was shaped following consultation with local stakeholders and is part of our commitment of making a genuine and lasting difference to the local area around the wind park. An investment of (€279,000) was made into providing energy efficiency upgrades to 47 homes close to the wind park helping local residents make a contribution towards meeting Ireland’s climate change targets.

During 2019 is the award-winning Galway Wind Park Scholarship Fund. The fund is Ireland’s first ever wind-powered scholarship and is designed to provide third-level education opportunities for local people to gain qualifications and build strong careers in the areas of energy efficiency, sustainability, environment, health, safety and social skills. Along with our joint venture partners Greencoat Renewables, we were delighted that the fund was recognized at this year’s Irish Wind Energy Association Awards (IWEA) where it won the “Wind Energy in the Community” award.

In March 2020, the coronavirus pandemic dominated everything. It really is remarkable how quickly communities reacted and mobilised themselves and I hope that by making our funds available to help with the emergency response, it has helped to make things that little bit easier. As we are emerging from lockdown it is clear there are many challenges ahead, but having seen the positive effects that our funding has had with helping towards the coronavirus response so far, our objective is that the funds continue to play a part in helping communities in the recovery phase.

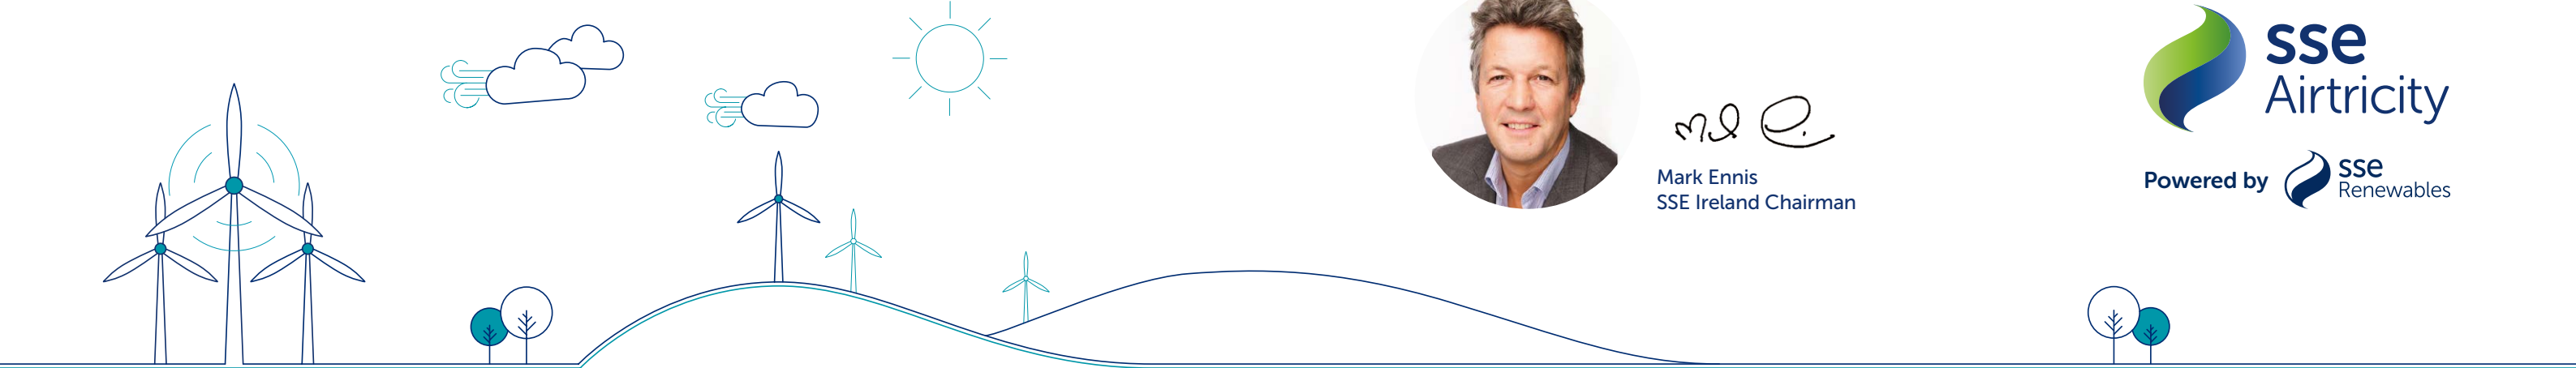

However, this report is focused on the 2019/20 year as a whole. It is a summary of every grant awarded to every community group we work with. Over the year we have awarded €1,380,000 to community groups, charities and grassroots organisations. This report highlights how every penny has been allocated and showcases only a small number of the projects and people that have received support from wind farms owned and operated by SSE Renewables through the SSE Airtricity Ireland Community Fund.

I hope you enjoy reading this report, and that like us you are inspired by the amazing work taking place in communities across Ireland. I would like to thank everyone involved for their hard work and good judgement, particularly the countless volunteers who play a huge part in every community.

BRINGING COMMUNITIES TOGETHER

Comhaltas Cosanta Pool Chuil Aodha, is an outdoor pool located in Coolea, Co Cork. The outdoor pool provides a romantic idea of being on holiday and welcomes a number of locals as well as tourists each year. The Chuil Aodha outdoor swimming pool was first built back in 1968 and has been providing a service to schools and local community members for over 40 years.

In 2011 as part of the Coomacheo Wind Farm Community Fund, SSE Airtricity on behalf of sister company SSE Renewables awarded Chuil Aodha over €40,000 towards a major heating upgrade to a highly efficient and modern heat pump which allowed them to become more sustainable, but also greatly reduced heating costs.

In 2018 Cosanta Chuil Aodha applied for funding towards a disability hoist to facilitate the safe access and egress of those who require support to use the pool.

In 2019 further funding was awarded to allow the facilitation of a disabled shower and changing rooms which provided the services required to allow those who require these facilities to use the pool with ease and made the experience more enjoyable.

Siobhán Ní Laocha, Cosanta Chuil Aodha, said "the funding received from SSE to date has been extremely positive for swimmers and families alike in the area. The upgrades to the heating system and facilities for the disabled mean the pool can extend its opening hours, meaning more employment for locals and a better service all year round".

THIS IS GENERATION GREEN

We believe everyone can take small steps to help the environment. Through education and awareness people can themselves can make a significant difference. The stories below highlight a some of the projects funded by the SSE Airtricity Community fund which will help sustain the environment for future generations.

Videos showing some of the local groups who have improved their energy efficiency and sustainability with the support of the community fund can be found at the link opposite, as part of the SSE Airtricity campaign on YouTube.

["This is Generation Green"](#)

DROMORE WEST BEEKEEPERS

We at Dromore Bee Keepers love to inform people about Bees and their benefits to the environment. There are over 100 species of Bees in Ireland which play a part in the ecosystem. We are very grateful to have received funding from the SSE Airtricity Fund to allow us to continue with our work

Jude Walsh

WINDMILL PLAYERS TEMPLEBOY

The support from the community fund has provided a space for our community to come together and do something they love. This facility gives people who might otherwise not see anyone for weeks on end the chance to meet up and socialise other people. It allows members of the community to integrate while doing something we enjoy.

Joe Burns

WEXFORD AQUA CLUB

The beauty of diving off Kilmore Quay really inspires us to protect the environment. The wonderful marine life and the birds in this area are truly spectacular. We organize beach clean ups on a regular basis to do our small part for the environment.

Ivan Donoghue

BRIGHT SPARKS

In August 2019 SSE Renewables and Greencoat Renewables launched the Galway Wind Park Scholarship Fund. This innovative fund is Ireland's first wind-power scholarship. The fund is designed to support students located within a 20km radius of Galway Wind Park.

The scholarship programme was created to help local students with their student fees and living expenses whilst creating a pool of well-trained and experienced professionals, transforming career prospects in regional communities and positively impacting future generations. The Galway Wind Park Scholarship Fund is typically worth around €50,000 per annum and provides 50% grant support towards a student's annual fees for a maximum of three years. The Scholarship supports students attending Galway-Mayo Institute of Technology (GMIT) and National University of Ireland (NUI) Galway as well as other educational institutions across the island of Ireland. In order to qualify for the scholarship, recipients have to demonstrate how receiving the scholarship will add benefit to one of the following areas; energy efficiency, safety, social and environmental sustainability, recreation and tourism with education and skills development.

Aedin O'Heocha Assistant Registrar at GMIT said: "The Galway Wind Park Scholarship is a welcome initiative and will allow recipients to focus on their college course thus affording them the opportunity to excel in their studies".

33 scholarships were awarded to recipients in 2019/20 with over €130,000 awarded. Successful recipient Eileen Welby from Oughterard, County Galway studying Bachelor of Arts (Hons) in Early Childhood Education and Care in GMIT Mayo campus said: "As my course is very intensive I was worrying about working part time to fund the course and managing my studies. Receiving this scholarship has eased that burden and allowed me to focus solely on my studies".

The Galway Wind Park Scholarship Fund opens for applications each September for students looking to begin their studies in the following academic year.

SUPPORTING LOCAL COMMUNITIES DURING THE COVID-19 (CORONAVIRUS) CRISIS

SSE Renewables' experience of working with communities has shown that each community is unique and that communities themselves are best placed to respond to their own needs. When the country went into lockdown in March 2020 due to the coronavirus pandemic it was clear that communities would play a key role in ensuring the most vulnerable residents were protected and supported.

The ability of local communities to establish projects and respond so quickly to this unprecedented public health emergency has been particularly impressive. Our response was to make sure that funding was brought

forward and made available to groups to help. Galway Wind Park Covid-19 response fund was the first launched followed closely by the funds for Cavan, Coomatalin and Coomacheo wind farms. It is anticipated that all the 2020/21 repurposed Covid-19 response funds will be administered by the end of October 2020.

To date, there has been significant demand for the funds, with the majority of applications being focused on providing services to vulnerable residents, including the delivery of food, medicine and essential goods and the provision of essential personal protective equipment (PPE).

Baileborough Community Centre, located close to Gartnanene Wind Farm, County Cavan were awarded funding towards their food and medical delivery service as well as the purchase of vital PPE equipment. **Kate Kelly**, a member of the committee said: "Baileborough Community Centre was utilised as the hub during the initial lockdown and allowed the community responders a space to organise and provide the vital food and medical delivery services to the

vulnerable in our community. We were delivering up to 80 meals a day at the peak of the crisis and funding from SSE Renewables provided the resources required to sustain this. Likewise, the funding received was also used for the vital PPE that we needed to sustain this service safely and ensure those volunteering were protected throughout".

As the initial rapid response measures eased the focus on funding shifted towards technology for school children to support distant learning, provision of online mindfulness and exercise programmes to support with mental health and the maintenance of the critical food and medical deliveries to those shielding.

St Michael's National School in Cootehill were awarded funding from the Bindoo Wind Farm Community Fund towards the purchase of tablets to support distance learning. **Norma Sherlock** Principal of the school said: "Unfortunately as is the case in many communities there are families with no access to technology which became a vital resource during the Covid pandemic. Through the funding received from SSE Renewables, St Michaels NS has been able to purchase 10 tablets and allocate these to the families most in need. The tablets have allowed the children to continue with their learning during lockdown and will continue to provide additional benefit to the school when it reopens again".

THE ROAD TO RECOVERY

The initial and immediate response to this unprecedented emergency is one thing, but it is clear that the road to recovery is going to be a long one. SSE Renewables' model for sharing the economic value of its investments with the communities around its wind farms will continue, and the funds will be even more critical to helping communities and their economies bounce back over the medium term.

GALWAY WIND PARK MAJOR PROJECTS FUND

The Galway Wind Park Major Project Fund was launched in 2018 following a period of community consultation to help inform how the fund would be established. The first two years of the fund was set aside for this project which saw homes close to the wind park being part of a major energy efficiency project. A total of 47 homes in Seanaphaesteen, Fermoy and Bunagippaun were included and received a number of energy efficiency improvements.

With some of the houses being over 70 years old, the initial stages of the project saw assessments being carried out to determine the level of work that was needed. During 2019, the project progressed to the next stage of delivery where the households were awarded a home energy measures upgrade coupon. In total €294,000 was invested in upgrades which included insulation, Solar PV panels, replacement of doors and windows and climate controls.

Improving the energy efficiency of older housing stock helps play an important part in tackling climate change and helping Ireland meet the energy efficiency targets set out in the Programme for Government. As well as experiencing the benefits that the upgrades have brought the investment has helped residents make the green transition.

Award-winning

Since its completion the project has gone on to receive recognition by winning two awards. The first was received at the inaugural Irish Wind Energy Association (IWEA) Awards where it won the "Wind Energy in the Community" and the second at the Chambers Ireland Awards 2019 for the Community Investment Category.

One recipient of the energy upgrades **Barbara Allen** said "I am very happy with the works done to my home and now that it's done, I wish I had it a long time ago. My only complaint now is my home is sometimes too warm!"

HOW TO APPLY

The SSE Airtricity Community Fund

The application process for the SSE Airtricity Community Fund is simple. Firstly, find out which wind farm is in your vicinity and make sure you meet the criteria listed below:

- Your group is a not-for-profit organisation
- You are requesting funding to benefit a community initiative, not an individual (although individuals may apply on behalf of a community project)
- Your community is situated within a 20km radius of the related wind farm. Priority is given to projects within a 5km radius

Next check the opening and closing dates for each of SSE Airtricity Community Funds on the SSE Renewables website, <https://www.sserenewables.com/communities/community-fund-locations/ireland/> and make sure your project fits in one of the following categories. Currently SSE Airtricity prioritises energy efficiency projects.

- **Energy Efficiency:** Delivers reduced energy consumption
- **Sustainability:** Drives community-centred environmental and/or social sustainability interest
- **Safety:** Improves safety for the community

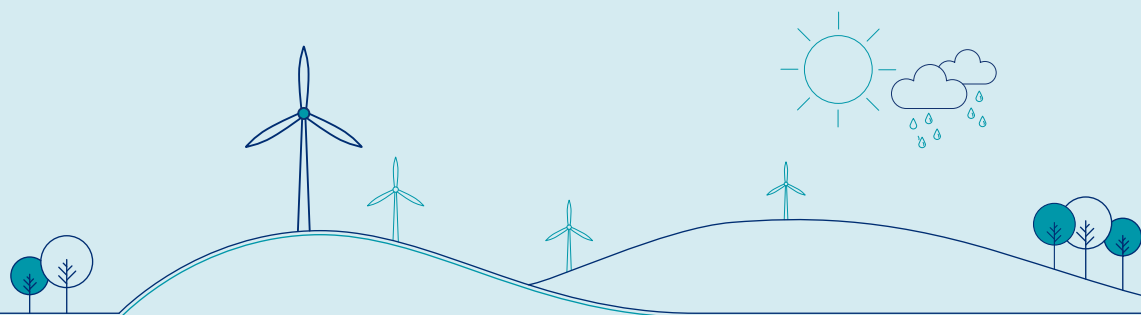

Lastly fill out the three short application forms listed below, telling SSE Airtricity about your community group and project and remember to attach quotes for the measure you are applying for. These forms can also be found on the SSE Ireland website.

1. The SSE Airtricity ROI Community Fund Application Form
2. The SSE Airtricity ROI Contractor Quote Form
3. The SSE Airtricity ROI Community Fund Declaration Form

Completed application forms should be submitted via email to communityfundireland@sse.com or send to SSE's Community Development Officer, Anne Reynolds, at SSE Airtricity, Red Oak South, South County Business Park, Leopardstown, Dublin, D18 W688

All Community Fund applications are evaluated on a competitive basis by a scoring panel. Proximity to the wind farm and the number of beneficiaries will be a key consideration. All applicants will be informed whether they are successful or unsuccessful. If successful, the team will let you know how much your project will be awarded and will organise a visit to your community to present successful groups with their funding.

If you have any queries with regards to these forms or the community fund please contact the team by emailing communityfundireland@sse.com or call Anne Reynolds on 01 655 6556.
