SSE RENEWABLES: BESS PROPOSAL

SSE Renewables is assessing the potential for development of a Battery Energy Storage System at a site north of Eggborough and east of Kellington (see reverse for map).

Any decision on whether to proceed with an application to develop the site will be taken after contractors have carried out some initial investigatory work. This includes ground and water course surveys, archaeological inspections at the site and desk-based modelling of potential connections to the UK energy grid. You may notice our contractors around the site during the next few months.

If a decision is taken to proceed with an application to develop the site, detailed plans for the design and scale of the proposed development will be shared and we will consult with you and your neighbours. The feedback received during this process will inform and refine any final proposal.

If you would like to discuss any aspect of our activity, or find out more about the development process, representatives of SSE Renewables would be happy to meet, either in person or via video call. Please let me know if this would be of interest. My contact details are:

Email: alan.greenwood@sse.com

Mobile: 07342 142714
