

Gordonbush wind farm - proposed extension

Overview

This exhibition

Since 2013 we have been exploring the possibility of an extension to our 35 turbine operational wind farm at Gordonbush, north-west of Brora.

We held a public exhibition in October 2013, early in the development process, to gather views on the proposed extension following initial scoping works. Since then we have undertaken detailed surveys and environmental assessments which have informed the design process.

The purpose of this second exhibition is to present the final design and show how it has developed throughout the different design iterations in relation to technical and environmental constraints and other considerations.

This exhibition also explains the 'next steps' in the process and the anticipated timescales for submitting our planning application, in addition to providing information on how we work with local communities around our projects.

SSE Renewables

We are the renewable energy development division of SSE and are involved in the development of new renewable energy projects, like the proposed extension at Gordonbush, as well as other wind, wave, tide and hydro electricity projects. SSE is one of the largest energy companies in the UK and is the largest generator of renewable energy in the UK and Ireland. Our core purpose is to provide the energy people need in a reliable and sustainable way. Headquartered in Perth, Scotland, we employ around 19,000 people operating across Scotland, England, Wales, Northern Ireland and the Republic of Ireland. SSE is involved in the generation, transmission, distribution and supply of electricity and the production, storage, distribution and supply of gas with around 11,700MW of generation capacity.
